EXP 6

Simulation of Handoff Scenario in a Mobile Network Using Figma

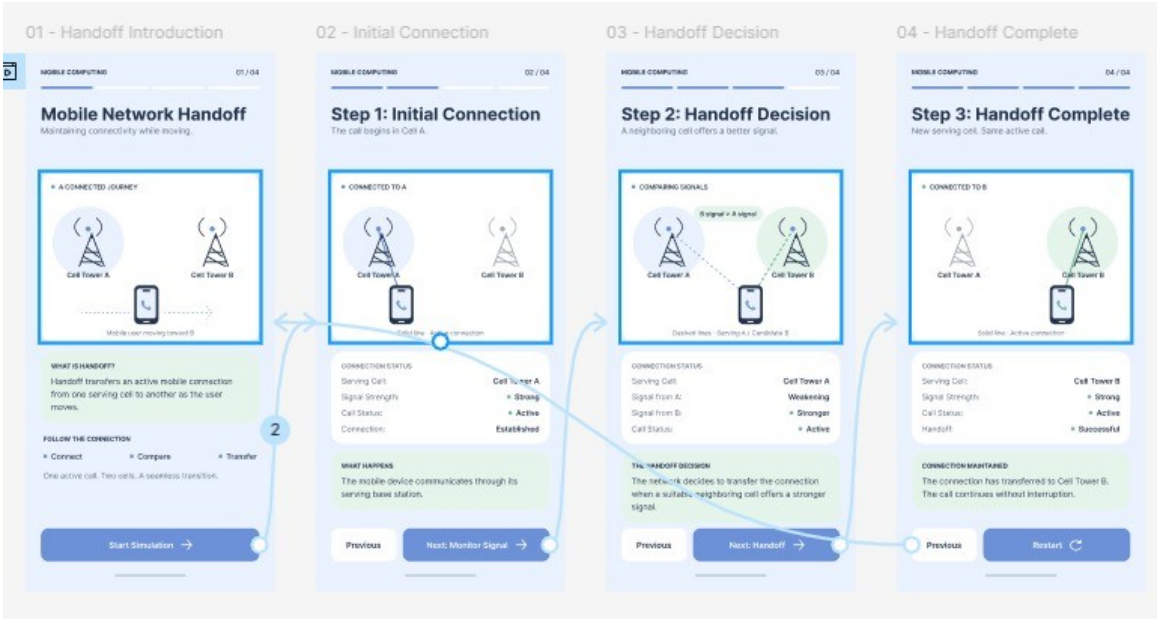

Aim

To design a visual simulation in Figma illustrating the handoff process in a mobile network when a mobile user moves from one cell coverage area to another.

Procedure

1. Open Figma and create a new design file.
2. Draw two cell towers representing Base Station 1 (BS1) and Base Station 2 (BS2).
3. Draw circular coverage areas around both base stations.
4. Add a mobile phone icon representing the moving user.
5. Use arrows to show the movement of the mobile user from Cell 1 to Cell 2.
6. Create frames illustrating the stages: initial connection, movement toward the cell boundary, handoff initiation, and connection to the new base station.
7. Use different colors to represent the active and inactive connections.
8. Connect the frames using prototype interactions to demonstrate the handoff sequence.

Implementation

Result

A Figma prototype illustrating the mobile network handoff process was designed, showing how an ongoing connection is transferred from one base station to another without interrupting the communication.
