EXP 7

Development of a Cellular System Performance Dashboard Using Figma

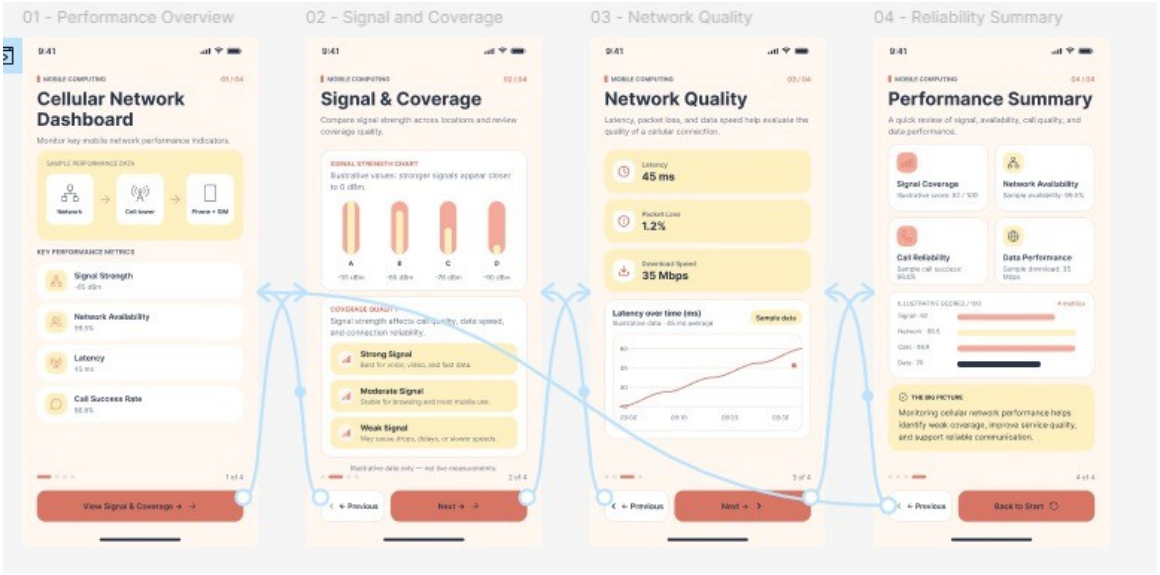

Aim

To develop a dashboard prototype in Figma displaying important performance criteria of a cellular communication system.

Procedure

1. Open Figma and create a new desktop dashboard frame.
2. Design a header containing the title “Cellular Network Performance Dashboard.”
3. Add cards to display key performance indicators such as signal strength, network latency, throughput, call drop rate, and network availability.
4. Use charts and graphs to represent network performance over time.
5. Add progress bars, status indicators, and color-coded labels to highlight network conditions.
6. Create a sidebar containing options such as Overview, Network Status, Performance, and Reports.
7. Arrange all elements using consistent fonts, colors, spacing, and alignment.
8. Use prototype links to connect dashboard sections and simulate navigation.

Implementation

Result

A cellular system performance dashboard prototype was created in Figma to visualize key network performance indicators using cards, charts, graphs, and status indicators.
